#### Risk and Reward Profile

Historical data, such as is used in calculating the synthetic indicator, may not be a reliable indication of the future risk profile of the Sub-Fund. The risk and reward category shown is not guaranteed to remain unchanged and that the categorisation of the Sub-Fund may shift over time. The lowest risk and reward category does not mean a risk free investment.

Due to the fact that the Sub-Fund invests in a specific and high-volatile market sector (pharmaceutical), the risk indicator is consequently medium-to-high (5). However, the risk category shown is not guaranteed and may shift over time while the lowest category does not mean “risk free”.

Besides, you must be aware that historical data is not a reliable indication of the future risk profile of the Sub-Fund. Please note the following risks are materially relevant to the Sub-Fund and are not adequately captured by the indicator:

- Liquidity risk: reduced liquidity means there are insufficient buyers or sellers to allow the Sub-Fund to sell or buy investments readily;
- Concentration risk: this risk is considered as moderated;
- Market risk: Price trends are determined mainly by financial market trends and by the economic development of the issuers, who are themselves affected by the overall situation of the global economy and by the economic and political conditions prevailing in each country. Market risk ranges from low to medium-high according to assets allocation.
